Fiore

CSC105 Web Development Individual Project

WEB OVERVIEW

The Web Development project I would like to create is **Fiore**, Which means flower in Italian. I will create Fiore to be eCommerce website illustrates the online florist store with full services, Customer can be done all process of purchasing flowers by using the website from select your favorite bouquet, buy and payment and delivered to your hands. The gimmick of The store is Bouquet Customized by own preferences feature which let you choose every-single-flower you liked and it will show-up yours in preview or else you can pick what bouquets you liked in gallery and can filter to find the suited ones easily. every elements in the website will be shown by digital motion paints.

Feature

Core Feature

1. Customize your own Bouquet

This Main Feature will let you create your own bouquet by selecting size of bouquet(amount of number is related to the your chosen size), kind of flowers you put in and show the preview of what your creation will look like before continue the payment process. User are allow to add or remove any flower elements according to the condition.

2. Filter Bouquet by category

This feature will show up the gallery of bouquet in many style for convenient to purchase in case you doesn't prefer to customize your own, There is a filter to show up only the related preference ones and hide the other bouquet away. User allow to on/off the filter and press in the bouquet to see more informations and doing payment process.

3. Automatic Chatbot FAQ

This feature will explain and provide Frequently asked question to the customers by make it in chat style. The feature will show up by press the message button and they will pop up the chat with the FAQ question to press, every question will be answered by the bot, user are just allow to pick question developer prepared for, they're not allow to type question by themselves, if contact seller needed, we will use 'contact us' sub feature instead.

4. My Order

Feature to show up the order we prepared before purchase, user can add amount and remove their order. this will also calculate the total price customer need to pay.

Sub-Feature (optional)

1. Flower card Information

This feature will show the flower card to let user press and they will show the general information each; meaning, color, price etc.

2. Contact us

This will be the footer feature linked with URL of seller contact such as email, telephone number and other directly contact information.

3. Authentication (Log in / Website Browser cookies)

This feature is for user to log in / sign up to the website and ask for permission for browser cookies.

4. Payment method (mock-up)

This feature is for purchase using credit card method and amount of money you need to pay in database. This would be artificial mock-up, doesn't synced with real API . Before finish the purchase process there will be an option of delivery, self pick-up or post delivers.

5. Promotion Website pop-up

This feature just show the general advertisement pop-up when we open the web, user are only allowed to read and close.
